DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. **Claims 1-14**, drawn to packet switched/circuit switched network, classified in class 370, subclass 352,356.
 - II. **Claim 15-18**, drawn to packet switched only network, classified in class 370, subclass 389.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because Invention II does not require circuit-switching conversion. The subcombination has separate utility such as making a telephone call over a PSTN. In particular, see applicant's figure 1 where Invention II is drawn to an IP telephony call from an IP phone 20A through a LAN to Inter-gateway 40a through the Internet to Inter-gateway 40b to a second LAN and then to IP phone 20B. Invention I on the other hand uses a PSTN telephone (e.g., 10A or 10B) and a PSTN gateway (e.g., 30A or 30B). These elements (i.e., the PSTN phone and PSTN gateway) are not recited in invention II. Thus Invention II is considered the combination since it uses packet switching and Invention I is considered the sub-combination since in addition to packet switching it also uses circuit switching. Invention II does not require circuit-switching in order

to operate (e.g., an IP-to-IP phone call). Invention I requires a PSTN to operate (e.g., a PSTN-to-IP phone call).
